History Autodesk began developing AutoCAD in 1981, with the first release occurring in December 1982, specifically designed for the Apple II and its unique graphics controller. In 1983, it introduced AutoCAD for the IBM PC. In October 1983, it released AutoCAD for the Atari 8-bit family. That same year, it added AutoCAD for the Commodore 64 and other early Apple II clones. In 1984, AutoCAD released AutoCAD for the IBM PC-AT, IBM PC-XT, and IBM PC-XT/286, with 16-, 32-, and 64-bit architecture support. In 1985, the company added a version for the IBM PC/XT, running in an IBM PC compatable mode called "AutoCAD for PC" and running in a DOS environment. In the same year, the company introduced AutoCAD for the Apple IIGS, IBM PS/2 (running in an IBM compatible mode), and Tandy TRS-80, which is an 8088 based PC, which all used the VGA graphics adapter. In addition, the company added AutoCAD for the Atari ST and TRS-80 Color Computer, which use the text display system called "AutoCAD TEX" or "AutoCAD Text". In 1986, the company released AutoCAD for the Apple IIc and Macintosh. In 1987, AutoCAD for PC was changed from VGA to XGA standard, and was also available for the Apple IIgs and Mac. In 1988, the company added AutoCAD for the Mac Plus and Mac 128/286, and AutoCAD for PC was extended to use the XGA standard graphics adapter. That same year, the company also added AutoCAD for the HP-48 Gx (a PDP-11 clone), and Apple IIe with enhanced memory features. In addition, AutoCAD for DOS was extended to use an extended version of QuickDraw, the company's GIS-based graphical library, called QuickDraw 3D. This allowed AutoCAD to produce 3D drawings. In 1989, the company added the AutoCAD for PC Layers, a feature that allows users to group objects and manipulate layers. That year, the company also added AutoCAD for Windows, which was the first time that AutoCAD ran on a PC running Windows. It also extended AutoCAD for DOS to support VGA and XGA standards, and AutoCAD for

We sought to evaluate the effect of acoustic ventilation on survival, health-care costs and on the quality of life of critically ill patients. Acoustic ventilation is the use of a sensor placed in the mouth of the patient to detect carbon dioxide (CO_2) levels in exhaled air, which triggers the release of oxygen by an electronic valve. A hospital-wide implementation of acoustic ventilation in an intensive care unit (ICU) was performed. The impact of acoustic ventilation on survival, health-care costs and quality of life was evaluated. A total of 645 patients were enrolled in the study; 31.9% of patients had a respiratory failure. Acoustic ventilation was associated with a significant survival benefit (10.3 versus 14.3%; $P = 0.004$). Patients treated with acoustic ventilation had a significant reduction in length of hospital stay (9.3 versus 13.2 days; P a1d647c40b

The distribution and molecular properties of a 40 kDa protein in the rat central nervous system were examined. Using a radioiodinated protein A assay, high concentrations of this protein were observed in brain and spinal cord. Autoradiograms revealed that this protein is enriched in the molecular layer of the cerebellum, in a number of nuclei in the brainstem, and in the superior olivary complex and spinal cord. The number of gold particles overlying the neuropil was higher in the central than the peripheral nervous system. Electron microscopic studies of these structures revealed that the 40 kDa protein is localized both within the nerve cell bodies and around nerve terminals. The 40 kDa protein was also localized to the glial processes that contact the nerve terminals. Using in vitro binding assays, the 40 kDa protein was found to be localized in the somata and processes of Schwann cells and oligodendrocytes. Since the 40 kDa protein is homologous to the von Willebrand factor (vWf), it was also examined whether the 40 kDa protein binds to the A-V junction. This protein was found to bind to the A-V junction in cultured nerve terminals and in the neuropil. The binding was abolished when the terminals were transected. The binding was not abolished when the terminals were stimulated but was blocked by a factor(s) in the synaptic cleft.Rutgers Scarlet Knights men's lacrosse The Rutgers Scarlet Knights men's lacrosse team is the intercollegiate varsity sports team for the Rutgers University–New Brunswick.
