● Fixes computer problems & increases performance ● Optimizes boot, files, application & device drivers ● Modifies Windows Registry & files ● Enhances system security PCMedik is a very easy to use software utility that helps you fix computer problems and boost the overall performance of the system. While most of the applications supposed to fix errors and increase speed come with very complex and more or less difficult to use features, PCMedik is a bit different, offering a more user friendly approach. Thanks to this fact, PCMedik can be safely used by all types of computer users, be they beginners and more experienced ones, as the whole task comes down to just a few clicks. The main window holds all the necessary features to optimize the system, so you have to choose the operating system, processor type and repair setting. PCMedik supports Windows 7, Vista, XP, 2000, and works with Intel and AMD processors. If you're not sure which kind of CPU you are using, there's also an "Unknown" option to keep you on the safe side. In case you're curious, PCMedik works by modifying Windows registry entries and system files to increase computer performance. For example, it checks Windows animation settings, file allocation sizes and buffers, device drivers, application priority levels and optimizes the boot, while also trying to fix software incompatibilities. PCMedik works quick and easy and although we didn't experience a significant performance boost during our test, we've received reports from users claiming that the program is doing an excellent job in many cases. Overall, PCMedik is a tool to try, that's for sure, and thanks to the fact that it provides only a few options, it is safely addressed to all types of users.
