Scarface: The World Is Yours - complete walkthrough [2017]Streams of liquid or gaseous material often contain suspended solid material. Gases include air, water, vapor, and the like; liquids include water and vapor, as well as other liquids, such as oil, of a somewhat similar appearance. In the field of oil-field operations, for example, there are various situations in which it is necessary to remove suspended material from a liquid (such as water) containing one or more other liquids, for the purpose of preparing the liquid to be treated for use in a subsequent operation. A particularly useful application is in the processing of crude oil, where the relatively heavy and viscous oil is suspended in water, or in other phases such as water and gas. This is the case in so-called "heavy oil" fields. In such fields, a producing well is drilled to a certain depth, and after drilling the well is completed by the installation of one or more treatment, or injection, units. In an oil well, injection units are used for processes that require the addition of substances that enhance oil recovery. Examples include water injection for secondary recovery, tertiary recovery, and pressure maintenance, and injection of hydrogen to capture oil and natural gas trapped in tight rock formations. In the injection of gaseous or vaporized substances into a liquid, such as water, the injection units typically install a vaporizer, such as a heater, that draws up
